SWIMLANE

Swimlane Corporate Overview
The leader in cloud-scale, low-code security automation

Low-Code Security Automation

Swimlane provides cloud-scale, low-code security automation for organizations of all industries and sizes. Our technology is relied upon by major security-forward organizations including Sony, Lumen, Sagicor and Toshiba. Customers consistently rate us as the #1 trusted low-code security automation platform. Swimlane Turbine harnesses the power of the world's most-extensible security automation engine to unlock the potential of automation beyond the security operations center (SOC) and serve as the system of record for the entire security organization.

Swimlane Customer Benefits

Stop threats at the point of inception

Organizations can decrease response times by 90%. A Swimlane customer cut MTTR by 50%.

Overcome the security talent gap shortage

A fortune 100 Swimlane customer saves $160,000 every month in labor costs by eliminating 3700 hours of work with automation.

Unify complex environments, disconnected teams and processes

Global organizations, like Lumen, reach 70% automation levels shortly after integrating Swimlane into their infrastructure.

Quantify the business value of security through a system of record

A fortune 100 Swimlane customer saves $900k a year with Swimlane. Their biggest savings come from outside the SOC use cases.

> "With Swimlane, we don't have to try to fit our outcome into a preconceived box that had already been developed. Swimlane allowed us to build something that worked for us and how we operate."
>
> - Matt Helling, Head of Cyber Security at Softcat

Trusted By Industry Leaders

Fortune 500 companies across every major vertical choose Swimlane for security automation, with nearly $1 trillion protected annually among our top 25 customers. It's clear why Swimlane is a top-rated security automation platform on Gartner Peer Insights.

LUMEN®   CGI   Sagicor   Softcat

Unlock the Promise of XDR

Swimlane Turbine is a breakthrough in capturing hard-to-reach telemetry and expanding actionability beyond closed extended detection and response (XDR) ecosystems. Turbine's approach to low-code security automation is both approachable enough for those with no coding experience, and sophisticated enough to satisfy the world's most demanding security teams.

Turbine's low-code security automation technology delivers on the promise of XDR, with robust telemetry ingestion, integration, workflow automation, case management, dashboard and reporting capabilities. Its user-friendly features like drag-and-drop data entry and built-in business logic make it easy to customize a wide-range of use cases. With Swimlane, organizations can rethink their SIEM strategy and expand upon the limitations of XDR to better show the business value of security, triage threats faster, and gain a system of record for security.
