SWIMLANE

Hero AI

Work faster and more efficiently than ever before with Hero AI, your private agentic AI companion.

Agentic AI automation for every security function

The convergence of agentic artificial intelligence (AI) and automation can solve some of the most challenging security, compliance, IT, and OT operational problems. This vision becomes a reality with the Swimlane Turbine agentic AI automation platform for AI SOC, vulnerability management, compliance audits, and business continuity management.

Hero AI, a dynamic collection of generative and agentic AI, boosts SOC efficiency by 20% beyond automation alone, while ensuring every decision is explainable and every action auditable. Intelligent automation routing applies AI only where it adds value, cutting costs while scaling capacity.

The Swimlane Turbine agentic AI architecture

Agentic AI is a type of artificial intelligence that autonomously makes decisions and takes actions to achieve specific goals without direct human oversight. At Swimlane, agentic AI is more than just a buzzword; it's built into the Hero AI architecture, powering enterprise-grade deep agents that are ecosystem-agnostic and built for explainable, auditable decision-making.

"Swimlane is a game-changer for us. The product is really great, but the team, wow. I love that team, really. We did in three weeks exactly the same that we did in one year with the previous one."

Patrick Côté, Cybersecurity Manager at Victrix

Hero AI Customer Outcomes

- 100% AI accuracy across all live playbooks
- Add the capacity of 20 virtual SOC analysts
- Resolve up to 99% of Tier 1 SOC tasks autonomously

Hero AI innovations that turn commands into action

Hero AI, Your Agentic AI Companion

Hero AI is a private, contextually aware AI SecOps companion that cuts through noise for real-time decisions. Hero AI finds, recommends, and executes playbooks and AI agents.

Agent Builder

Build custom AI agents for specific skills, drop them into playbooks as individual steps, blending deterministic automation with targeted agentic AI. No complex scripts needed.

Hero AI Model Selection

Choose an AWS Bedrock model (or BYOM) per agent to balance cost, performance, and availability.

Playbook Generator Agent

Generate playbooks from plain language, call the Swimlane LLM directly in playbook steps, and get clarifying questions plus real-time progress as Hero AI builds or edits playbooks.

Agentic Investigations for AI SOC

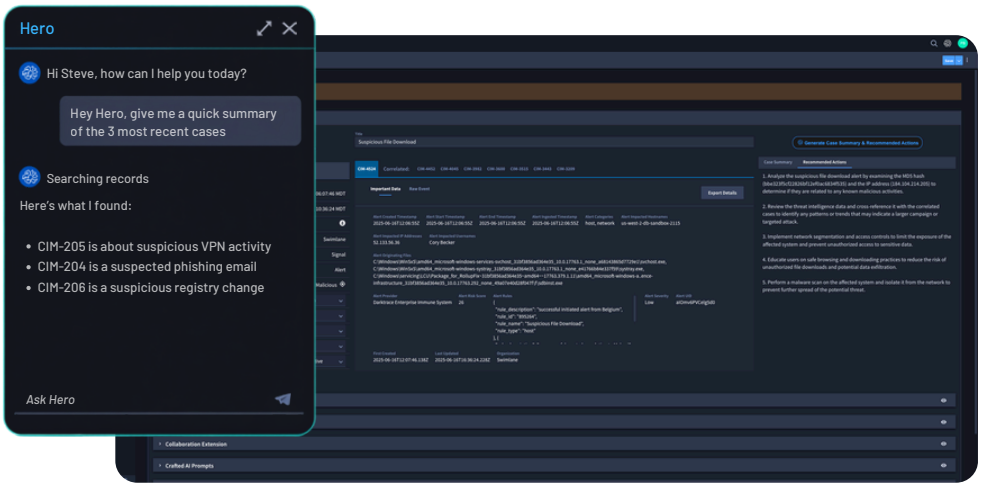

Run a fully agentic investigation with zero configuration, or keep your analyst in the driver's seat, leveraging AI for an assisted investigation method.

Data Ingestion Agent

Connect new sources to Turbine with a deep agent for less manual integration work. So teams can onboard new data sources faster and spend less time on integration upkeep.

AI-Augmented Reporting & Visualization

Create and send AI-augmented after-action reports in any language with a single click. Describe any report or visualization in plain language; Hero AI instantly generates it, shows a live preview, and applies it directly to your dashboard or case.
