# 2023 Cyber Threat Readiness
Key Findings and Misconceptions

Global Study Overview

Swimlane partnered with Dimensional Research, a leading independent research firm, to conduct a global survey of more than 1,000 security professionals. We investigated cybersecurity perceptions, current trends, and the secret to security operations (SecOps) effectiveness.
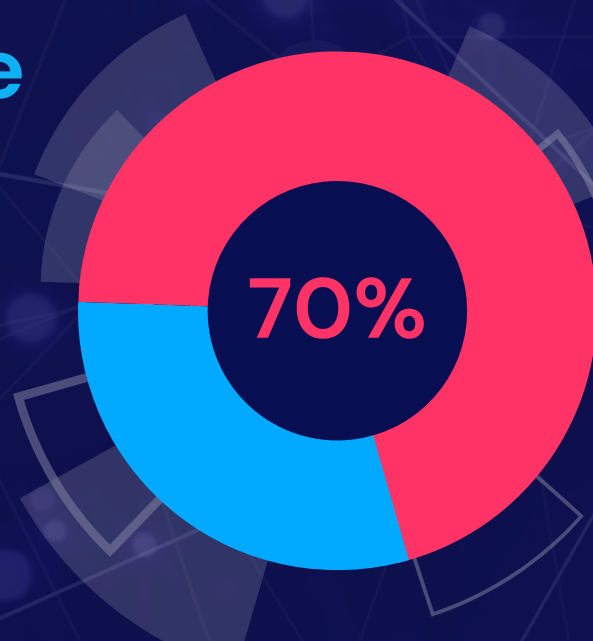

Top-Down Security Disparity

70% of executives across the globe believe all alerts are being handled, starkly contrasting what 36% of front-line workers that address the alerts believe.

The Talent Shortage Amplifies Risk

70% of companies also report it takes longer to fill a cybersecurity role now than it did two years ago. The challenge has led one-third of organizations to believe they will never have a fully-staffed security team with the proper skills.

The Power of Low-Code

78% of organizations that can effectively and efficiently handle every alert they receive already leverage low-code security automation. 98% of all security practitioners surveyed recognize the advantages of low-code security automation solutions.
