

JOINT SOLUTION BRIEF

# Swimlane and Dragos

## Bridge the Gap Between IT/OT with Centralized Case and Vulnerability Management

### → Benefits

Comprehensive OT and IT Visibility

Enhanced Collaboration Between IT/OT Team

Automated Regulatory Compliance

Proactively Risks Mitigation

### Challenge

Most Industrial Control Systems (ICS) and Operational Technology (OT) were created before modern security best practices were developed. The legacy nature of these systems coupled with the sheer volume of OT assets and internal resource constraints leaves organizations vulnerable. The need for OT cybersecurity modernization has never been greater, but change comes with its own challenges.

As OT and IT systems converge, the teams that manage these technologies must forge new ways to communicate and collaborate. Otherwise, the lack of collaboration and reliance on manual processes will hinder incident response and security outcomes. As the threat landscape continues to evolve with ransomware, operational disturbances, and breaches on the rise, IT and OT teams need technology that can provide better visibility, intelligence and is capable of accelerating response when threats occur.

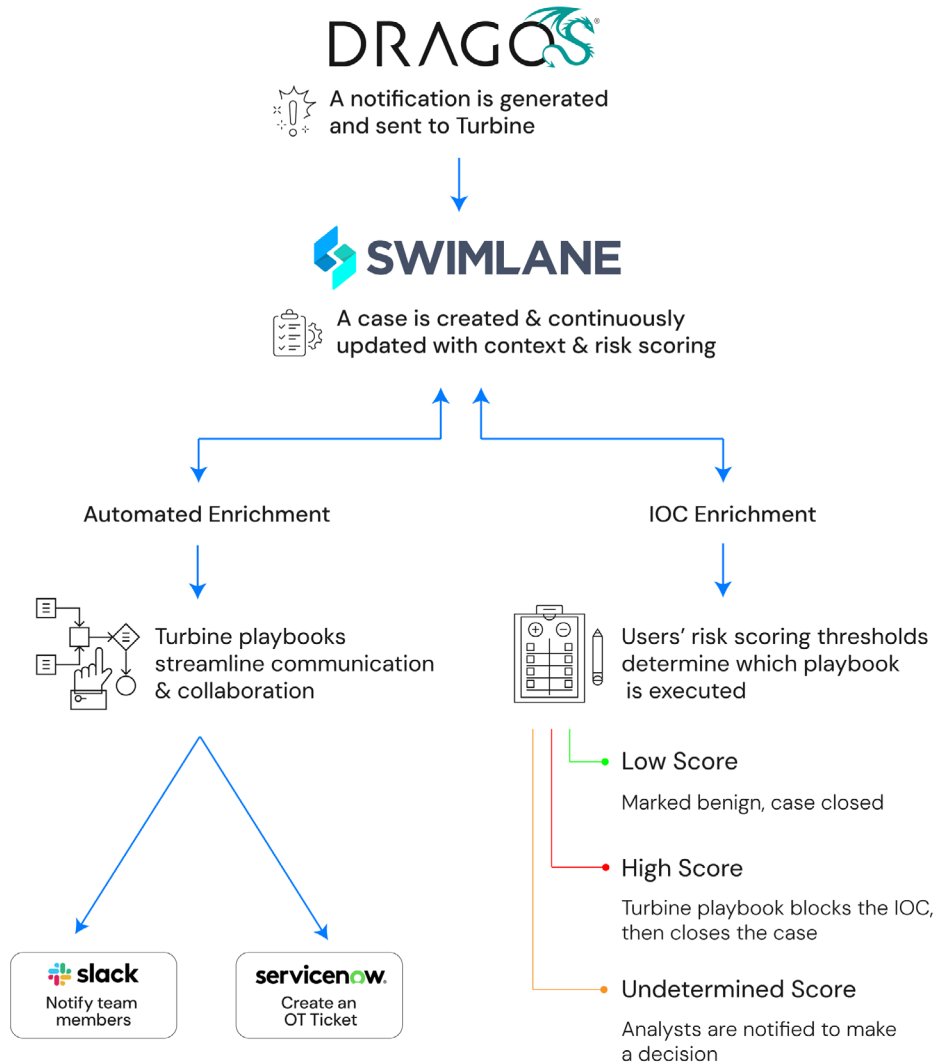

### Solution

Cybersecurity analysts need comprehensive and robust defense against evolving threats in the ICS landscape. The Swimlane Turbine and Dragos Platform integration ingests and enriches infinite sources of IT and OT data to provide comprehensive visibility in a single system of record for OT cybersecurity. The Dragos Platform provides comprehensive asset visibility, vulnerability management, and threat detection in ICS and OT environments, which translates to in-depth contextual alerts, enriched risk scores, and prioritized guidance.

The Swimlane Turbine AI-enabled security automation platform ingests and enriches Dragos data before it initiates automated workflows and centralizes case management. Turbine's ability to automate data enrichment at scale reduces context switching for OT analysts and reduces the dwell time of potential CVE's and IOC's. The benefits of the Swimlane and Dragos partnership extend across IT and OT domains.

## → Integration Capabilities

- Asset Enrichment
- Vulnerability Triage
- Contextual Alerts
- Notifications Triage
- Incident Escalation and Response
- Prioritized Guidance

## Better Together

### About Swimlane

Swimlane delivers automation for the entire security organization. Swimlane Turbine is the AI-enabled, [low-code security automation platform](#) that unifies security teams, tools, and telemetry in-and-beyond the SOC into a single system of record to reduce process and data fatigue while quantifying business value and ensuring overall security effectiveness.

### About Dragos

Dragos has a [global mission](#) to safeguard civilization from those trying to disrupt the industrial infrastructure we depend on every day. The [Dragos Platform](#) offers the most effective industrial cybersecurity technology, giving customers visibility into their ICS/OT assets, vulnerabilities, threats, and response actions. The strength behind the Dragos Platform comes from our ability to codify Dragos's industry-leading OT threat intelligence, and insights from the Dragos services team, into the software. Our community-focused approach gives you access to the largest array of industrial organizations participating in collective defense, with the broadest visibility available.
