

Are You Ready For Automation?

Assess, benchmark and advance your security automation capabilities.

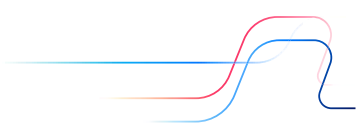

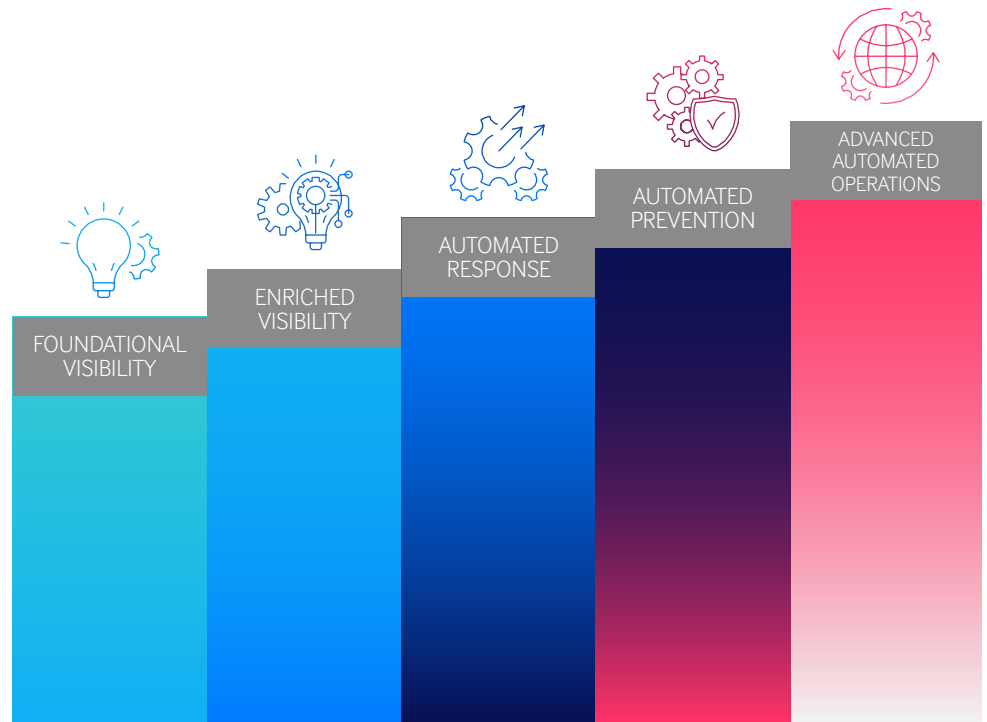

→ Security automation has made the shift from “nice to have” to “need to have”. Unlike threat detection, the security industry does not have established frameworks for security automation best practices. As a result, many organizations are overwhelmed by the people, process and technology considerations that go into automating security processes. This leaves security leaders asking questions like:

1. Is my organization ready for security automation?
2. What automation use cases achieve the fastest time to value for organizations like mine?
3. How do I compare with peers in my industry, location or company size?
4. How do I know if my investment in automation is optimized for maximum ROI?

The **Swimlane Automation Readiness & Maturity of Orchestrated Resources (ARMOR) Assessment** is built to help you answer these very questions. Our customers have been deploying and maturing their security automation capabilities for over a decade now. We’ve harnessed insights from their collective lessons learned to inform the **ARMOR Matrix**. This matrix builds on the readiness assessment by providing a detailed guide for how to implement technology and controls in order to advance security automation outcomes.

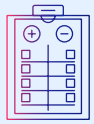

Security Automation Readiness Assessment

We’ve developed a simple yet comprehensive ARMOR assessment that only takes 5 minutes to complete. It asks a series of 20 multiple choice questions related to the people, process and technology components of your security operations program. It’s designed to instantly score your current state relative to five potential maturity levels. Next, it will examine your desired future outcomes in order to recommend next steps.

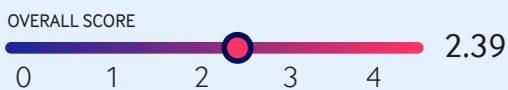

→ Outcomes-Driven Executive Summary

The assessment experience concludes with an ARMOR executive report. Your report will be specific to the phase of maturity that you're currently in. It provides recommended readiness actions, security automation use cases and enhancements that are realistic relative to your current state and goals.

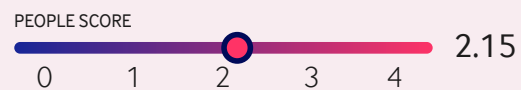

OVERVIEW

An Automated Response score indicates that your organization has established a comprehensive SecOps program foundation...

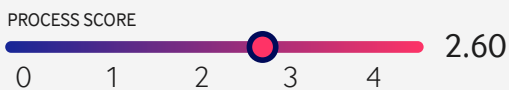

PEOPLE

Your team has a strong acumen for your existing security tools and moderate coding skills which allows your organization to...

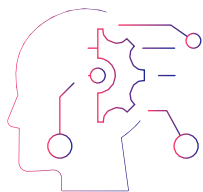

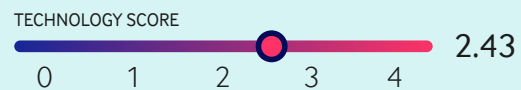

PROCESS

Your organization has defined and implemented company-wide processes and policies. To further your SecOps processes you should...

TECHNOLOGY

In order to enhance your current automation use cases, you will need to build a feedback loop for continuous learning within your technology interactions...

Take the Assessment

After you complete the assessment you will see a summary of your ARMOR level and our automation experts will be available to consult with you and recommend more specific next steps. Get started with your own assessment today at swimlane.com/armor-assessment
