

# Turbine Hero AI

The Ultimate SecOps Companion

## Maximize SecOps Effectiveness and Accountability

Hero AI is a collection of artificial intelligence (AI) innovations available in Swimlane Turbine. It combines human and machine intelligence to optimize Security Operations (SecOps) and maximize return on investment. With Swimlane’s combination of generative AI, automation, and low-code technology security operations center (SOC) teams elevate productivity to new levels.

**240%**

### Return on Investment

TAG Cyber reveals that enterprises achieve 240% return on investment with Swimlane Turbine.

**25 Seconds**

### Python Script Generation

Hero AI Text-to-Code ChatBot generates complex scripts in seconds.

**+2 SOC Analysts**

### Productivity Gains

Save 10 minutes per Hero AI prompt, and add SOC analyst capacity to your team.

## Hero AI Innovations

### The Swimlane LLM

Swimlane developed its own secure and transparent large language model (LLM) to ensure that all Turbine solutions can be AI-enhanced while all data is kept private and secure.

### Crafted AI Prompts

Hero AI crafted prompts enable customers to leverage data in alerts, cases, intelligence, and automation pipelines. They can select from a range of LLM and apply AI throughout any workflow.

## AI Case Summarization

Hero AI case summarization is an intuitive tool that uses the Swimlane LLM to categorize and prioritize issues more efficiently. It helps analysts quickly understand the most intricate cases, alerts, and intelligence.

## Context-Aware Recommended Actions

The Swimlane LLM is trained on all cybersecurity frameworks and customers own Knowledge Base best practices. Hero AI takes context from these sources to recommend specific actions based on its individualized learning algorithm.

## AI-Augmented Reporting

Hero AI generates stakeholder-ready after-action reports in seconds. These reports clearly communicate complex, technical information, to stakeholders of all skill levels and native languages.

## Schema Inference

Hero AI schema inference is an intelligent testing and curation tool that allows users to gain complete insight into a data source for any action, streamlining access and empowering analysts to build robust and efficient playbooks with ease.

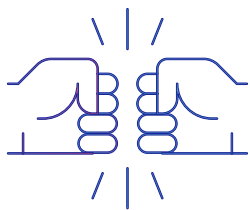

## AI-Enhanced ChatBots

### Text-to-Code

The Text-to-Code ChatBot acts as a one-stop scripting assistant to generate complex scripts. Powered by OpenAI, it generates Python outputs and executes test actions directly within Turbine Canvas. This ChatBot helps to create powerful playbooks with advanced logic in mere seconds.

### HelpDocs Query

The HelpDocs Query gives instant answers when and where needed, in any language. This AI-enhanced ChatBot is trained on the Turbine Platform documentation to provide immediate support for questions.

## Get Started with AI-Enhanced Automation Today

Ready to experience the transformative capabilities of Swimlane Turbine? Request a demo at [swimlane.com/demo](https://swimlane.com/demo)

Swimlane delivers automation for the entire security organization. Swimlane Turbine is the AI-enhanced low-code security automation platform that unifies security teams, tools, and telemetry in-and-beyond the SOC into a single system of record to reduce process and data fatigue while quantifying business value and ensuring overall security effectiveness.
